

# RESEARCH ENGINEER BIOMEDICAL OR NANOTECHNOLOGY

Since the early 1980s **ENSIL**<sup>®</sup>, has been a leader in R&D and Manufacturing of Products used in Telecommunication, Medical, Defense and Aerospace Industries.

There is an immediate requirement for a few Biomedical or Nano-Technology Research Engineers with a minimum of 5 years proven research experience in the areas of sensors and bio-fluid agent detection (sensors) to join the team of researchers and scientists at Ensil developing a new line of medical diagnostic products.

Strong knowledge of high precision analog and digital data acquisition, in conjunction with laboratory experience in assays of biological fluids, DNA detection, Bio-sensors, Proteomics and wet-chemistry automated instrumentation would be a definite asset.

Applicants who are innovative, free-thinkers and willing to challenge the boundaries of conventional product design are invited to send their resume in confidence to **hr@ensil.com**
